"We in the Pacific face the prospect of losing three nations altogether—the low-lying atolls of Kiribati, Tuvalu and the Marshall Islands. And even for a nation like Fiji, with our mountainous volcanic islands, we too are in the process of relocating 45 communities and have so far identified 930 that are at risk. In a worst case scenario Fiji has offered to explore the issue of 'permanent refuge' to the people of our closest neighbors, Kiribati and Tuvalu—a sensitive discussion we hope to continue in earnest, as our moral responsibility. These are issues of real and global concern that must be meaningfully addressed in the Paris Agreement...We have of our own accord made a budgetary allocation next year to examine all the legal implications of climate change, such as climate change refugees and loss of territoriality."

- H.E. Mr. J.V. Bainimarama, Prime Minister of Fiji

"We know that future damages are not going to be simply large, but potentially be absolute in their wrath. Resulting in mass relocations of oceanic societies with the risk of losing social and cultural ways of life, culminating in civil and social unrest, and possibly genocide of oceanic cultures."

- H.E. Mr. Peter M. Christian, President of Micronesia

"Consider further the danger faced by island-nations such as Kiribati, Tuvalu, and the Maldives, whose existence is threatened by rising water levels. Their extinction will be a certainty, unless we pursue realizable goals that acknowledge that, for some nations, the fight against climate change is a matter of survival. In our own experience in the Philippines, we have been working to break the vicious cycle of destruction and reconstruction, where affected locales, especially our coastal communities, slide back into an impoverished state with one calamity. The primary challenge has been to move our countrymen to less vulnerable areas, on the assumption that such do exist..."

- H.E. Mr. Benigno Aquino III, President of the Philippines
